KeeeX helps to simplify expertise processes !

Who?

JLB Expertises is a company providing expertise in agricultural matters for cargo insurers with regard to surveys and damage linked to maritime transport.

With a presence in all West African ports, the company offers services in maritime transport risk prevention, quality control, store/warehouse inspection and stock control/monitoring.

Problem starting?

JLB Expertises approached us with a simple problem:
How to facilitate remote control and expertise?

Until now, to check the condition of a stock, an expert was sent on site, which was a waste of time and entailed significant human and logistical costs.

Solution ?

KeeeX thus proposed to JLB Expertises its Photo Proof Pro solution, involving a back office and a mobile application.

JLB Expertises' back office allows the creation of a customised scenario that it was able to adapt to its environment (generation of a new user, access permission, tags and exploitation metadata integrated into the photos), the creation of a QR code for connection to the mobile application and the possibility of verifying the evidence.
The login QR Code is then sent directly to the end user.

The mobile application will open directly on the scenario that has been created beforehand, as soon as the user has flashed the QR Code he has received.
The application allows for the taking of probative photos of documents or events incorporating proofs of integrity, identity, time stamping, geolocation and existence on the blockchain.
Once the file has been validated by the user, the photos will be sent automatically to the JLB Expertises environment.

Value proposition?

Thanks to our remote auditing solution, JLB Expertises was able to provide additional confidence in their files, as the keeexed files have integrity and show proof of the place and date according to the instructions given.

In addition, it enables to offer to insurers an equivalent monitoring solution at a lower cost due to the reduction in expert travel, which saves time and helps to limit its carbon footprint.
