

PRESS RELEASE

CES 2018 Las Vegas : Keeex puts Blockchain (and Bitcoin) in the consumer applications field!

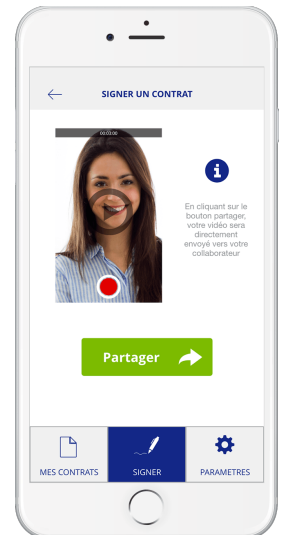

Paris, November 5, 2017 - Keeex, the leader in Embedded Digital Signature, announces its presence at CES 2018 Las Vegas. Already in Las Vegas in 2017, the startup will present its new application on Eureka Park.

The must-attend event of the **global high tech scene** will take place from January 9 to 12, 2018. Keeex will be present for the second time at CES Las Vegas. Selected in 2017, the startup had presented its application **Photo Proof**, one of the first Blockchain applications for the consumers, to certify photos taken from their mobile.

State of car or real estate, package received in bad condition, publication of an online ad, the user has a photo with proof of integrity, geolocation, date and easily verifiable by others. A partnership with Orange also allows users to archive their photos on Orange Cloud.

Keeex will present in January a new edition a new application: **Signatory by Keeex**. Quick and easy to use, the application allows you **to sign a contract or give your consent through a short video**. The recording is protected by Keeex technology (integrity, identity, date, geolocation) and the file hash is notarized on the Bitcoin Blockchain. In the digital age, Signatory provides an innovative way of contracting and a fast way offered to the user to register their consent.

Laurent Henocque, founder & CEO Keeex : « *The CES has proved a fantastic opportunity for Keeex last year. We expect the best this year, notably by attracting more interest of american or international industry, press and investors* »

Application Signatory by Keeex

The startup will also present other solutions : **certified press releases and financial communication, proof of consent for GDPR/retail/medical, ultra-secure collaboration for boards and Blockchain-based probative pictures and videos.**

A PROPOS DE Keeex

Keeex, a startup founded in 2014, is the leader in Embedded Digital Signature. It has developed and patented a unique blockchain complementary technology that secures any type of digital file by sealing proof of integrity, identity, date, and geolocation in the metadata. The startup collaborates with SNCF Réseau, EDF, Orange, Thales, Engie. Keeex has integrated in October 2017 Station F as part of the Thales Cybersecurity program.
